Practical - I

Roll No. : 44	Name: Amit Umarvaish
Class : SY IT	Batch : 1st
Date of Assignment : 15/07/26	Date/Time of Submission : 15/07/26

A farmer wants a program to perform basic calculations related to farming.

The program should:

- **Display the farmer's profile.**

Code:

```
print("-----Profile-----")
```

```
print("Farmer Name : Amit")
```

```
print("Village : Green Village")
```

```
print("Farm : 9 Acres")
```

Output:

```
-----Profile-----
```

```
Farmer Name : Amit
```

```
Village : Green Village
```

```
Farm : 9 Acres
```

- **Add the weights of two harvested crops.**

Code:

```
c1 = int(input("Enter the weight of first crop : "))
```

```
c2 = int(input("Enter the weight of second crop : "))
```

```
total = c1 + c2
```

```
print("Total Weight =", total, "kg")
```

Output:

```
Enter the weight of first crop : 50
Enter the weight of second crop : 60
Total Weight = 110 kg
```

-

Find the square root of the total harvested area.

Code:

```
import math

area = int(input("Enter the total harvested area : "))

print("Square Root =", math.sqrt(area))
```

Output:

```
Enter the total harvested area : 10
Square Root = 3.1622776601683795
```

-

Calculate the area of a triangular field.

Code:

```
base = int(input("Enter the base : "))
height = int(input("Enter the height : "))
area = 0.5 * base * height

print("Area of Triangle =", area)
```

Output:

Enter the base : 30
Enter the height : 70
Area of Triangle = 1050.0

- Swap the quantities of two fertilizer bags if entered in the wrong order.

Code:

```
bag1 = int(input("Enter the quantity of first fertilizer bag : "))  
bag2 = int(input("Enter the quantity of second fertilizer bag : "))  
temp = bag1  
bag1 = bag2  
bag2 = temp  
  
print("Swaping of Fertilizer Bags =", bag1, bag2)  
print("Amit 44")
```

Output:

Enter the quantity of first fertilizer bag : 50
Enter the quantity of second fertilizer bag : 60
Swaping of Fertilizer Bags = 60 50
Amit 44
